HalSail FAQ

How does HalSail analyse the turnout statistics of my boats?

HalSail can produce statistics about the turnout for each boat. From the *Result* menu click *Analyse turnouts* to bring up a list of all the series that have any results. Select one or more series. Click *Analyse* to get HalSail to calculate what proportion of races each boat has taken part in.

Different boats will be in different classes, so not all boats are eligible to take part in all races. HalSail will produce a list of all the boats listing the number of races available to it, the number of races it took part in and its percentage turnout.

Note that a boat does not have to finish a race in order to have "taken part". Any result apart from DNC counts.
