HalSail FAQ

Which apps does HalSail integrate with?

HalSail has full integrations with the following apps.

- SailEvent for collecting entries and tallying afloat and ashore.
- PYOnline for uploading data to the RYA's database of Portsmouth Yardstick results.
- Irish Sailing Live for uploading to the depository of results for Irish clubs.

In addition HalSail can import data in the form of Excel or csv files. So you can import boats from any entry system that produces lists of boats in one of those formats. You can also import a list of racing classes, or a list races for the schedule. If you have a system that takes results in the form of sail numbers and finish times, or finish places, you can import those too.
