**HalSail FAQ**

**Can I import my data from Hals Race Results?**

If you have used the off-line version of Hal (Hals Race Results) you can get started in HalSail by loading your data from a Hal file.

Open Hals Race Results and use the file menu to make an archive file. Store it somewhere on your computer.

Log into HalSail and open the Admin menu. Click the 'Load from Hal file' item.

Loading from a Hal file destroys everything that is already in your HalSail account, so if you have data in HalSail you will be asked whether you want to save it. You will then be asked to confirm your action by emailing you a code that you have to enter.

Navigate to the archive file you made with Hals Race Results and load it.
