HalSail FAQ

How does HalSail take account of the size of my screen?

HalSail can be viewed on a great variety of devices from the smallest phone to large desktops. All the pages on the HalSail web site are capable of scaling to take advantage of the screen space available.

The need to adjust to the size of the screen is particularly acute in pages with a lot of information. This is especially true of the pages that give the results of races and series. When using these pages you will notice considerable change to the format of the data according to the screen size.

HalSail adjusts the format to the following screen widths in pixels

Name	Min	Max	Representative devices
Xxl	1400	none	Desktop computers and large laptops
Xl	1200	1399	Desktop computers and large laptops
Lg	992	1199	Desktop computers and large laptops
Md	822	991	Smaller laptops
Sm	550	821	Tablets in portrait mode and phones in landscape
Xs	0	549	Small phones in portrait mode
